From Elsevier : Encyclopedia of Health Economics 3 Volume Set before purchasing it in order to gage whether or not it would be worth my time, and all praised Encyclopedia of Health Economics 3 Volume Set:

The Encyclopedia of Health Economics offers students, researchers and policymakers objective and detailed empirical analysis and clear reviews of current theories and polices. It helps practitioners such as health care managers and planners by providing accessible overviews into the broad field of health economics, including the economics of designing health service finance and delivery and the economics of public and population health. This encyclopedia provides an organized overview of this diverse field, providing one trusted source for up-to-date research and analysis of this highly charged and fast-moving subject area.Features research-driven articles that are objective, better-crafted, and more detailed than is currently available in journals and handbooksCombines insights and scholarship across the

breadth of health economics, where theory and empirical work increasingly come from non-economists Provides overviews of key policies, theories and programs in easy-to-understand language

The ...volumes have many strengths. They will be comprehensive, up to date, and linked to web sites with additional information. The papers to be included will be readable and therefore accessible to a wide audience. The plans to have more than one paper on the same subject and to include all schools of thought are especially appealing. The volume has in my view no weaknesses. --Michael Grossman, National Bureau of Economic Research, USA

About the Author Tony Culyer is Ontario Research Professor of Health Policy System Design in the faculty of Medicine at the University of Toronto (Canada) and a professor of economics at the University of York (England). He is a founding father of health economics. He was founding co-editor of the Journal of Health Economics and the founding Organiser of the (UK) Health Economists Study Group, the first of its kind anywhere). He was, from its creation in 1999 until 2003, Vice Chair of the National Institute for Health and Care Excellence (NICE) and is chair of NICE Internationals Advisory Committee. He has been a member of or chaired many UK National Health Service committees (especially those to do with research) and trusts and was responsible for the 1994 report that led to the redesign of the NHS's system for supporting RD. He is chair of the Office of Health Economics in London (England). For many years he was chair of the Department of Economics Related Studies at the University of York (England) and, for six of them, was also deputy vice-chancellor of the university, with special responsibility for the University's research infrastructure and performance. He is currently Editor-in-Chief of a new on-line Encyclopaedia of Health Economics. His Canadian connections include having been Chief Scientist at the Institute for Work Health in Toronto and chair of the Toronto-based Workplace Safety Insurance Boards Research Advisory Council. He is a board member of the Canadian Agency for Drugs and Technologies in Health (CADTH) and has served on several Ontario Ministry of Health and Long Term Care committees. Dr Culyer has published around 300 articles in various books and scholarly journals and he has written or edited 33 books. A collection of his essays, called *The Humble Economist*, edited by Karl Claxton and Richard Cookson, was published in 2012 (University of York Office of Health Economics) and is now available on-line free of charge. He is a founding Fellow of the Academy of Medical Sciences. His honours include Commander of the British Empire, Hon DEcon (Stockholm School of Economics) and Honorary Fellow of the Royal College of Physicians of London.
