Susan L. Woodward, Joyce A. Quinn : Encyclopedia of Invasive Species [2 volumes]: From Africanized Honey Bees to Zebra Mussels before purchasing it in order to gauge whether or not it would be worth my time, and all praised Encyclopedia of Invasive Species [2 volumes]: From Africanized Honey Bees to Zebra Mussels:

0 of 0 people found the following review helpful. Awesome book! By LD It arrived very quickly and exceeded my expectations. Overall a great experience. I work specifically with invasive species and this has so far proven to be a

great resource.

This two-volume set provides a one-stop resource on invasive plants, animals, fungi, and microorganisms that are threatening native ecosystems, agriculture, economies, and human health in the United States. 79 entries on animal species and 89 entries on plants, including some fungi and microorganisms State-by-state lists of invasive animals and plants designated as noxious or invasive Maps accompany each entry, depicting the organism's original habitat and the regions to which it has now spread Tables on pathways of introduction and impacts of invasive plants Hundreds of photographs of featured plants, animals, and fungi A glossary of terms related to the biology and ecology of invasive species Appendixes containing information on organizations and legislation related to the prevention or control of invasive species

"A valuable reference for scientists and concerned citizens. The introduction provides an insightful analysis of concepts and issues surrounding invasive species and a brief history of invasion biology." - *The Quarterly of Biology*"Notable for concise and reliable coverage of a plethora of invasive species, the set merits high recommendation for inclusion in special, public, and undergraduate libraries. Students and nonspecialists will find the work informative and engaging." - *Booklist*"Summing Up: Recommended. Lower-level undergraduates and above." - *Choice*"The proliferation of invasive species makes this timely set an important reference source." - *Library Journal*About the AuthorSusan L. Woodward is professor emerita of geography in the School of Environmental and Physical Sciences, Radford University, VA, where she previously taught courses in biogeography and human ecology.Joyce A. Quinn is professor emerita of geography, retired from California State University, Fresno, CA, where she taught a number of courses in physical geography and cartography.
