We use Elements of Science, and this year is Biology for the Logic Phase with our home taught 5th grader. It has reading assignments from this encyclopedia as well as a couple others. This one is my daughters favorite. It is easy to understand and read for her level but not as simplified as some of the younger targeted ones. The illustrations are beautiful. 2 of 2 people found the following review helpful. A fantastic addition to any family library! By Michael L. CookMy stepdaughter is very interested in animals as of late, and to encourage her in her learning, I purchased this book. The book arrived on time, in excellent condition. The photographs and illustrations are brightly colored and very descriptive! The book is packed with information on virtually everything, very comprehensive: Origins of the universe, our solar system, earth, and

life, evolution, a vast amount of plant and animal species, habitats, weather patterns, and more! My stepdaughter absolutely loves the book! I highly recommend this book to anyone with a curiosity about the natural world!0 of 0 people found the following review helpful. Five StarsBy Pedro P. Villarreal MtzMy kid loved it
