**Miles Kelly : Encyclopedia of Sharks** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Encyclopedia of Sharks:

Encyclopedia of Sharks is a giant encyclopedia offering a comprehensive insight into the world of sharks for children aged 8+. Divided into clear sections, the book begins by exploring what sharks are and where they live, and progresses to how sharks work and life in the water. Shark species are then covered in great detail, revealing how great whites hunt their prey and why basking sharks cruise with their mouths wide open. This leads on to relatives of sharks, such as rays and sawfish. The book concludes by looking at sharks and people, including tourist attractions, why sharks are

in trouble, and what we can do to save them. A useful source of information for school projects or homework.
